Assignment # 04

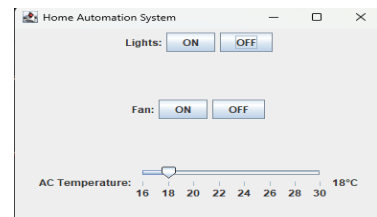

CLO-03: Create a program using standard libraries.

Using the concepts of Java Swing, write the programs with outputs for the following scenarios.

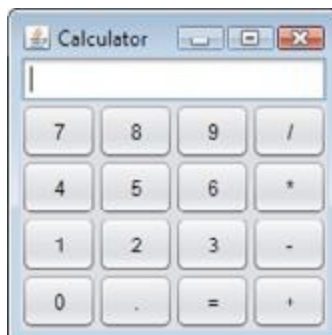

1. A home automation system enables users to control various appliances like lights, fans, and air conditioners through an interactive graphical interface. Events like button clicks or slider adjustments trigger actions such as turning devices on/off or adjusting their settings. This system demonstrates the concept of event-driven programming where user actions (events) initiate corresponding responses.

Goal: To create a home automation GUI with the following functionality:

1. Turn lights and fans ON or OFF using buttons.
2. Adjust air conditioner temperature using a slider

2. Write the code to create the following GUI. The GUI should have functionality of calculator for performing all the mathematical operations shown in the GUI.

*** The End***
